

My lab

Patient access to your lab

by netlims.com

My lab

We live in an era where there's an application for almost everything and an abundance of information of all kinds. We have high expectations of the applications we use, just as our patients do of medical applications. Medical information should be as easily accessible as other important information. When it comes to laboratory test results, patients expect access to the results from anywhere, and because the medical field is unfamiliar territory for many, it is all too important to provide them with information that is clear and easy to understand to prevent confusion, while also being easily accessible on-the-go.

MyLab was developed for the patient, giving them access to their lab results and enabling them to perform additional functions. MyLab developers took into consideration its intended users and their level of medical literacy, as well as the high standards expected of medical applications. This ensures that the user receives accurate information and the kind of user experience that is expected of modern professional applications.

Clear and detailed

When dealing with sensitive information, such as laboratory test results, the presentation of the information is of great importance. For this reason, MyLab's display has been designed to be clear, organized, and user-friendly. The patient receives a comprehensive and detailed summary of the information, including ranges, a comparison to previous results, graphs, and more. Abnormal, urgent (STAT), and other non-standard results are accentuated to ensure that they are not neglected. A laboratory can also provide patients with additional test information and an explanation of the results. This can be in the form of text, pictures, videos, and more.

Complete picture

MyLab arranges all of the patients' and their family members' laboratory tests (permission dependent) in an organized manner and makes them searchable using filters. The results are available for an unlimited amount of time so that they are always accessible.

MyLab also displays outstanding orders that have been ordered by the physician and are awaiting collection. Future orders are also displayed, giving the patient a complete picture of all orders - past, present, and future.

Controlled and safe

MyLab enables the patient to access the laboratory results, but gives the laboratory and physician full control as to when each test can be accessed by the patient and which types of tests (pathology, genetics, etc.) can be accessed by the patient. This ensures that patients aren't prematurely exposed to information that requires prior mediation by a professional.

Clear and organized display of test results

Graphical display of trends

Access to all family members' accounts from a single account

Searchable history according to certain parameters

Results are easily shared with others

Displays awaiting orders

Guarantees patient and data confidentiality

Secured application

Communication with the physician at the swipe of a finger

Available for iOS and Android

NeTLIMS - a boutique LIS vendor

Experience and expertise

Twenty years of international experience in developing and implementing Laboratory Information Systems for clinical laboratories has established NeTLIMS as best of breed among LIS providers. Over these years, we have accumulated many impressive successful installations, delivering solutions to large laboratories and multi-site networks with unique and complex needs.

Innovation

As an innovative company and industry leader, our aim is to leverage our technology to enable laboratories to get the most out of their facilities by attaining maximum efficiency and focusing on business growth.

Partnership

The success of our partners is our number one priority, which is why we are committed to providing the best possible response to all requests and inquiries. Our team accompanies the customers on site, from the beginning of the installation process to its successful completion. Our goal is to make the implementation process as smooth as possible.

Service oriented

As a boutique company, we pride ourselves in providing personalized service of the highest standards, by catering to the specific needs of each laboratory that we serve.
